

# Football Manager: Player Recommendations

# What is Football Manager?

## Soccer Manager Game

- Big database of players
- Manage a team
- Wage Budget

# The Problem

- Scouting can be Expensive
  - Have to pay for packages
- Scouting can be Unreliable
  - Wasted wages
- Implement a Query Tool
  - Enter position
  - Specific attributes
  - Filters
  - Analysis

The packages owned determine the number of players available to search through as well as increasing the knowledge level and player role visibility of players covered. Youth packages cover players aged 21 and under.

SENIOR PACKAGES	YOUTH PACKAGES
<b>WORLD</b>  Best package available. Covers all players in the world. €279K (€23K p/m)	<b>WORLD</b>  Best package available. Covers all players in the world. €557K (€46.5K p/m)
<b>EUROPE</b>  Covers players in that continent. €209K (€17.5K p/m)	<b>EUROPE</b>  Covers players in that continent. €418K (€35K p/m)
<b>UK &amp; IRELAND</b>  Covers players in that region. €139K (€11.5K p/m)	<b>UK &amp; IRELAND</b>  Covers players in that region. €279K (€23K p/m)
<b>ENGLAND</b>  Covers players in that nation. €59K (€4.9K p/m)	<b>ENGLAND</b>  Covers players in that nation. €118K (€9.75K p/m)
<b>PREMIER LEAGUE, EFL CHAMPIONSHIP, EFL LEAGUE ONE</b>  Covers players in your division and surrounding divisions. €35.5K (€3K p/m)	<b>PREMIER LEAGUE, EFL CHAMPIONSHIP, EFL LEAGUE ONE</b>  Covers players in your division and surrounding divisions. €71K (€6K p/m)
<b>EFL CHAMPIONSHIP</b>  Lowest package available. Covers players in your division. €11.75K (€975 p/m)	<b>EFL CHAMPIONSHIP</b>  Lowest package available. Covers players in your division. €23.5K (€2K p/m)
<b>NO PACKAGE</b> Covers only players known to the club's staff. €0 (€0 p/m)	<b>NO PACKAGE</b> Covers only players known to the club's staff. €0 (€0 p/m)

# Setting Up Data

1. Tough to find datasets  
<https://www.kaggle.com/ajinkyablaze/football-manager-data>
2. Separate dataset (160k x 89) into 15 smaller datasets (position >= 12).  
Each set stored in dictionary with an index. ( $O(n^2)$ )
3. For each dataset, drop unnecessary columns and fit attributes into a weighted function  $w_1 * a_1 + w_2 * a_2 + \dots + w_m * a_m$ .
4. For every player predict a value based on the function ( $O(m * n)$ ).
5. Sort based on that value
6. Huge runtime, but only need to do once.

```
Index(['UID', 'Name', 'NationID', 'Born', 'Age', 'IntCaps', 'IntGoals',  
      'U21Caps', 'U21Goals', 'Height', 'Weight', 'AerialAbility',  
      'CommandOfArea', 'Communication', 'Eccentricity', 'Handling', 'Kicking',  
      'OneOnOnes', 'Reflexes', 'RushingOut', 'TendencyToPunch', 'Throwing',  
      'Corners', 'Crossing', 'Dribbling', 'Finishing', 'FirstTouch',  
      'FreeKicks', 'Heading', 'LongShots', 'Longthrows', 'Marking', 'Passing',  
      'PenaltyTaking', 'Tackling', 'Technique', 'Aggression', 'Anticipation',  
      'Bravery', 'Composure', 'Concentration', 'Vision', 'Decisions',  
      'Determination', 'Flair', 'Leadership', 'OffTheBall', 'Positioning',  
      'Teamwork', 'Workrate', 'Acceleration', 'Agility', 'Balance', 'Jumping',  
      'LeftFoot', 'NaturalFitness', 'Pace', 'RightFoot', 'Stamina',

      'MidfielderRight', 'WingBackLeft', 'WingBackRight'],  
      dtype='object')
```

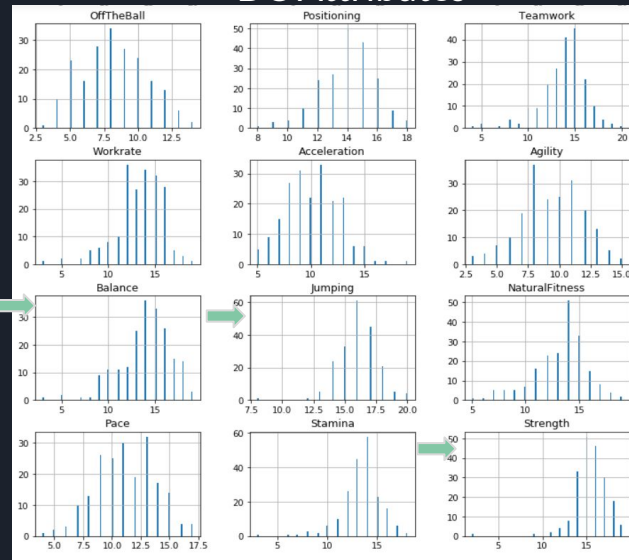

# Querying Data

1. Input Position,  $k$ , attributes, filter(height, age, weight etc.).
2. Filter rows.
3. Return top  $k$  rows.
4. If attributes defined, Give every player a value based on attributes inputted:  $\text{newValue} = \text{value} + \text{avg}(\text{attributes})$ . Then sort. ( $O(n \log n)$ ).

# Attribute Analysis

1. A player may not know exactly what attributes they need.
2. Input position
3. Query for top 200 players in the position. ( $O(n \log n)$ )
4. Plot attributes (48 plots)
5. Skew left more important

## DC Attributes

# Query : New Striker

# Observations/Improvements

## Observations

- Basing selection off weighted functions is unreliable (GK)
- More attributes = better selection of players

## Improve Runtime

- Fagin's (FA) Algorithm ( $O(N \cdot m \sqrt{\frac{k}{N}})$ )
- Parallelize data

## Future Work

- Filters
- Player Roles
- Regens
